

How to fill an observation file

This pack is the paper first-in companies and site ops keep with the emergency action plan. Walk or fly the named property. Write what you see. Date the stills. Do not invent what is not in the picture.

Order of work

1. Name the property, the date, and who keeps the file.
2. Photograph people, ways out, holes, confined space, medical access, and the path apparatus uses.
3. Fill one row per finding. Still numbers go in the last column.
4. Keep the file with the site emergency action plan. Update it when the ground changes.

What belongs in the file

People. Who is on the roof, in the hole, or not at the assembly point.

Egress. Gates, ladders, pinch points, crowd queues.

Excavation. Ladder, box, lip, spoil.

Confined space. Limited entry, vent, retrieval — describe, do not classify.

Medical. Ambulance in, patient out, LZ if marked.

Limits

This is an observation template. It is not an inspection, a PE stamp, or the employer's emergency action plan. Radio / Fusion Sensor is a separate product.

Site observation file

PROPERTY		DATE	
CLIENT		KEPT WITH	Emergency action plan

DOMAIN	WHAT THE WALK / STILLS SHOW	STILL #
People		
Egress / ways out		
Assembly / accounting
